REPLACEMENT TUBE BUNDLES

We have made the process easier to replace damaged tube bundles. Our focus is strictly on the needs of our clients. We dedicate our time to **water** and **steam** applications in institutional, commercial, and industrial markets.

WHAT WE DO

- ✓ We focus a great deal on **customer service**. Each client is as different as each application. Those needs fuel our promise to keep clients first.
- ✓ **All orders are directly placed with the factory**. No time is lost from when an order is submitted to when it is processed as there's no "middle man" adding to the order process.
- ✓ We work with pipe fitters and field technicians on developing **proper measuring techniques** in order to expedite the sizing process. This reduces the time waiting for various reps to be on site.
- ✓ A call, email, or text to provide us with the basic information of the type of tube bundle (steam-to-water, water-to-water), model number, and installation details will allow us to **price the replacement tube bundle that very day**. We also offer site visits to provide piece of mind your replacement tube bundle will fit.
- ✓ The faster we ship ... the quicker you can install the replacement tube bundle. **Freight is always included**.
- ✓ Often-times we must redesign the tube bundle to change the capacity. Our long experience in the tube bundle replacement market provides **engineering expertise** as well as computer selection calculations.

Our Mission is to be OF SERVICE to our clients
